01 / THE OPERATING CHANGE

A maintenance request, before and after.

The resident's channels and the manager's authority stay in place. The work between those points becomes a connected process.

RESEARCH REVIEWED

- [Company website]
- [Portfolio / markets]
- [Current tools or operating signal]

FOR [CLIENT COMPANY]

[One specific observation about the maintenance operation]

Public information shows **[verified detail]**. That makes **[observed handoff]** a useful place to connect reports with **[Client PMS]**, so **[specific role]** sees the original request and prepared choices together.

Replace every bracketed item with a verified fact before sending.

TODAY — A coordinator assembles the decision

1. **Resident reports through existing channels** — STAYS
   Portal, email, SMS, or phone.
2. **Staff builds the context by hand** — MANUAL
   Read and sort messages, match the unit, ask for details, then search policy, history, and vendors.
3. **Manager decides; staff follows through** — STAYS
   Approval, PMS records, and vendor contact use the current process.

AFTER INTEGRATION — The system prepares; people decide

1. **The same resident channels receive the report** — STAYS
   No new resident app is required.

API, webhook, or approved mailbox ↓

ADDED COORDINATION SERVICE — Runs in [Client Cloud] or an approved managed environment

2. **Connect the request.** Match the sender, unit, conversation, and open work.
3. **Ask what is missing.** One focused question at a time; replies stay with the same request.
4. **Prepare the decision.** AI interprets the issue; fixed safety rules check it; vendor options are readied.

Original message + prepared choices ↓

5. **Manager approves; existing systems carry out the action** — STAYS
   The PMS and vendor channel record and send only the confirmed decision.

02 / ONE REQUEST

From report to confirmed handoff.

A spreading sink leak shows how the resident, automation, manager, PMS, and vendor channel work together.

RESIDENT
10:42 PM

“Water is spreading under the kitchen sink. I turned the tap off, but it is still coming out. My dog is inside. You may enter.”

01

EXISTING CHANNEL → ADDED INTAKE

Capture and match

The exact words are saved, the resident and open work are linked, and receipt is acknowledged.

02

ADDED SERVICE

Interpret and check safety

AI reads the issue
Likely plumbing, active water, access, and pet details.

Fixed rules check risk
Spreading water raises urgency and alerts the on-call manager.

03

RESIDENT + ADDED SERVICE

Clarify without losing time

System asks “Can you safely reach the water shutoff?”
Resident replies “No.” The answer joins the same request; the manager alert stays active.

04

HUMAN DECISION

The manager chooses the action

One view shows the original report, water risk, access and dog notes, and eligible plumbers. The manager can approve, edit, or hold.

05

EXISTING BUSINESS SYSTEMS

Confirmed action moves outward

One approved action updates the PMS and contacts the selected vendor. The resident receives a factual update only after delivery succeeds.

FOR THE TEAM **Earlier risk visibility · Less routine chasing · One tracked vendor action**

When the path breaks Unclear or sensitive cases go to a person. Failed vendor contact stays visible and open; no resident message claims a vendor was reached.

03 / CONNECTIONS AND CONTROL

Where it connects to your business.

The service exchanges approved information with the tools already in use. Your PMS remains the business record.

EXISTING **Resident entry points**

[Resident Portal]	[Maintenance Email]	[SMS / Phone System]
Form and files	Message and attachments	Text or voicemail event

Approved API, webhook, or secure mailbox ↓

ADDED **Maintenance coordination service**
[Client Cloud] or approved managed environment

Connect	Prepare	Track
Match identity, unit, and request.	Ask, interpret, apply fixed rules.	Keep state, approvals, retries, and audit.

Controlled read, decision, and confirmed write ↓

EXISTING **Business tools and people**

[Client PMS]	↔	Resident and unit context in; approved work and final status back.
[Manager Channel]	↔	Decision package out; authorized choice back.
[Vendor Channel]	↔	Approved job out; delivery and response back.
[Reporting Tool]	←	Status, volume, and exceptions from confirmed events.

BUSINESS RECORD	CLIENT CONTROL	WHEN A LINK FAILS
[Client PMS] stays authoritative.	**Access, policy, approval limits, and hosting are yours to approve.**	**The step is retried or given to a named person.**

To confirm for [Client Company]: PMS access and permissions, current message channels, vendor contact route, and hosting requirements.

NEXT STEP

Map this to your actual tools.

A short working call can confirm the available connections and the first useful scope.
