MAINTENANCE TRIAGE / BUSINESS CHANGE

What changes in your maintenance process

The same resident channels and PMS. Less manual preparation before your team decides.

RESEARCH REVIEWED

[Website / source]
[Portfolio / markets]
[Verified operating detail]

A NOTE FOR [DECISION MAKER]

At [Client Company], [verified detail] may make [operating goal] a priority. Connecting [intake] to [Client PMS] would give [team] the request details in one place before they decide.

Assumed current process

- **Resident channels**
  Portal, email, SMS, or phone reports.
- **Staff read and identify**
  Find the resident, unit, and open work.
- **Staff chase missing details**
  Ask questions and piece replies together.
- **Staff search and prepare**
  Look up policies, vendors, and job details.
- **Staff decide and coordinate**
  Approve work, send it, and chase updates.

With the system

- **Same channels, connected**
  Reports enter one controlled intake.
- **Identity and request linked**
  Match units, duplicates, and related work.
- **Focused follow-up questions**
  Ask for missing details; keep replies linked.
- **Context and options prepared**
  Check policy and vendors; draft job notes.
- **Staff decide; workflow tracks**
  Record confirmed sends and follow-ups.

STAYS	Channels, PMS, people's authority
REDUCED	Reading, copying, and chasing
ADDED	Connected intake, AI, fixed rules, request state, and follow-up checks

What this helps your team do

Less repeated prep and fewer duplicate actions.
Faster decisions with clear ownership.

MAINTENANCE TRIAGE / END-TO-END WORKFLOW

From report to verified completion

See what AI prepares, what the workflow handles, and where your team decides.

1 **Receive and connect** WORKFLOW

Save report and files; match resident and unit. Link replies, duplicates, and incidents; acknowledge receipt.

2 **Interpret and check** AI

AI suggests urgency and trade; flags access, pets, language.

Fixed rules: only raise urgency; safety alerts do not wait.

3 **Clarify and reassess** AI + WORKFLOW

Ask approved follow-ups. Link and reassess each reply.

4 **Prepare the work** AI + WORKFLOW

Draft PMS and vendor notes; check trade, coverage, hours, and compliance.

5 **Obtain the human decision** MANAGER

Manager reviews the source and reason; may hold, edit, change priority, assign, choose a vendor, or seek owner approval.

6 **Execute the approved action** WORKFLOW

After approval, update PMS and contact the vendor once. Tell the resident only after a successful send.

7 **Coordinate progress** WORKFLOW

Track vendor replies, quotes, confirmed times, and delays. Answer status without a new request.

8 **Verify and close** STAFF

Staff verify and close in PMS; workflow sends the approved final update.

WHO HANDLES WHAT

AI

Reads reports, finds gaps, and drafts notes.

Workflow + rules

Links records, enforces policy, asks questions, checks vendors, and tracks sends.

Manager + staff

Manager approves work and vendor; staff handle exceptions and close.

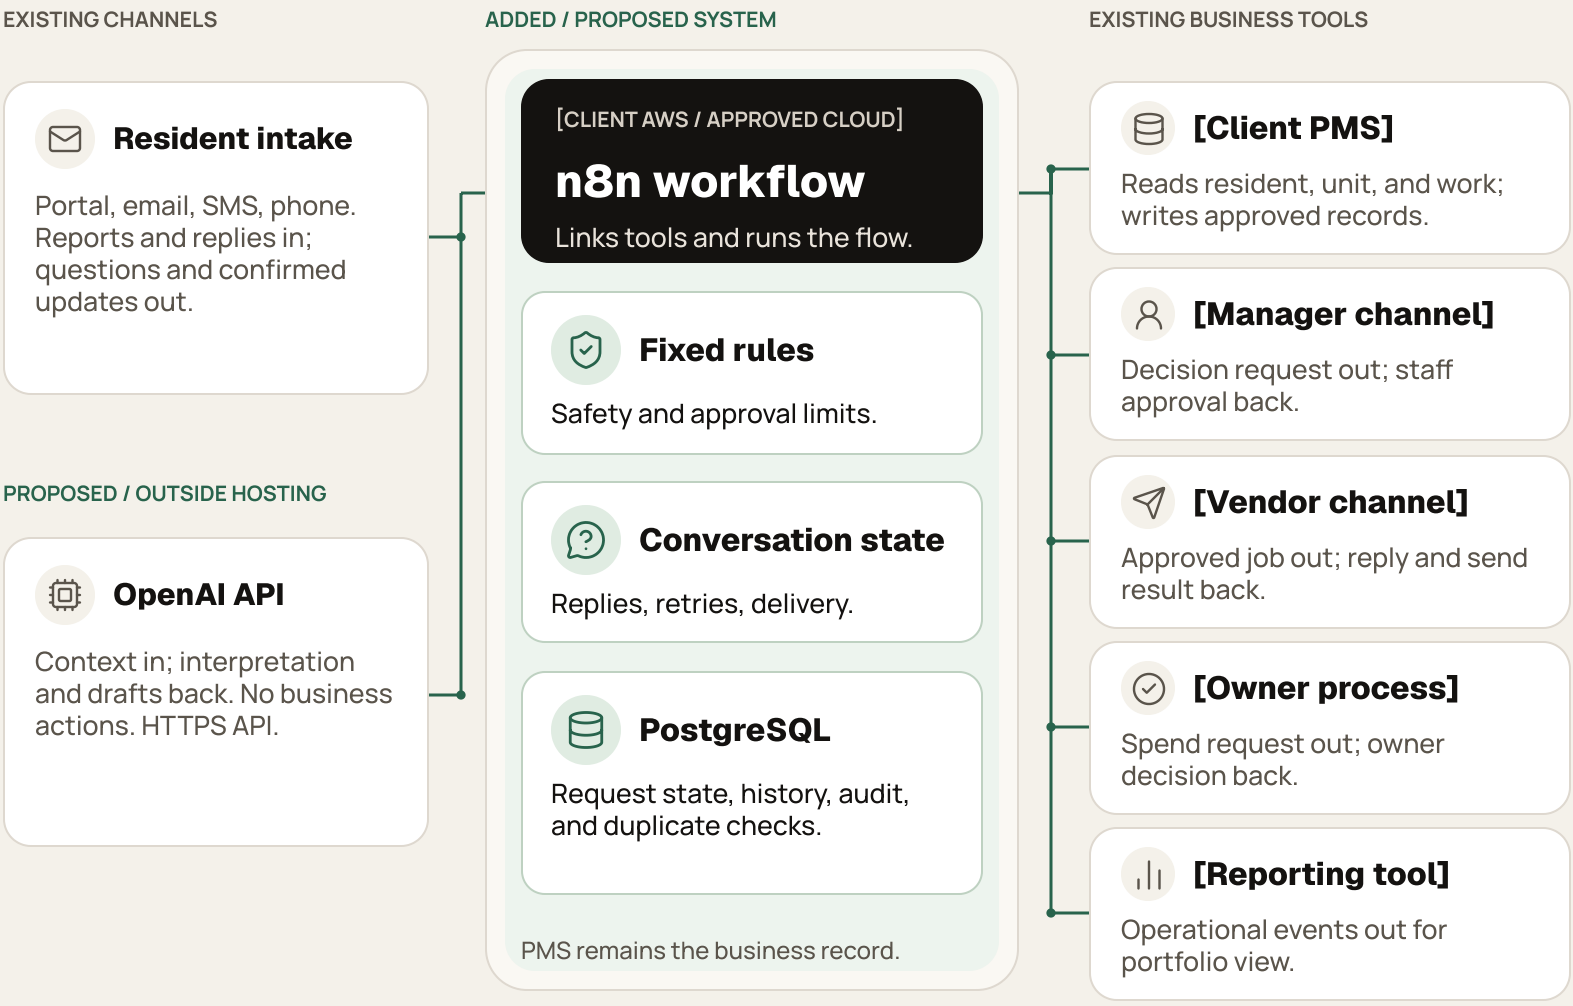

AT ANY STAGE

Unclear, sensitive, or failed cases go to named staff.

MAINTENANCE TRIAGE / TOOLS & CONNECTIONS

How your systems connect

Proposed stack and routes. Access depends on the client's accounts and permissions.

ROUTES TO CONFIRM WITH THE CLIENT

Intake: [API / webhook / secure mailbox]

Manager: [app / secure review link]

Owner: [existing approval]

PMS: [API / partner / import]

Vendor: [PMS / portal / email]

Reporting: [feed / export]

MAINTENANCE TRIAGE / OPERATIONS & OUTCOMES

How your team runs it each day

Staff work in familiar tools. Each waiting item or failed action has an owner and a next step.

Daily operating view

Priority work. Urgent and overdue items, owner/vendor delays, and unowned work.

Alerts. Follow on-call and quiet-hour rules; check unanswered emergencies. Age alone never creates an emergency.

Daily summary. Volume, response targets, waiting work, and exceptions.

Human authority

Staff choose vendors and approve dispatch, spend, appointments, credits, emergency downgrades, and closure.

Sensitive-case review

Legal or accommodation issues go to staff. Verify identity before sharing records.

Controls and recovery

Keep failures visible

Keep requests and safety checks if AI fails. Retry failed writes or sends; assign exceptions. Block stale or duplicate approvals.

Protect and maintain the service

Resolve data conflicts. Set roles/MFA, encryption, secrets, and retention. Monitor; test backup restores and rollback. Review changes; no self-training.

What this changes for the business

Linked history reduces chasing; policy-led alerts limit interruptions. Confirmed updates and shared reporting make handoffs and portfolio work easier to track.

Discuss your maintenance workflow.

Review your tools, connections, and approval rules.
